AMIF – Migration and

Integration Asylum Fund 2014-

2020

Optimization and improvement of assistance systems for third country nationals.

OBJECTIVE

The project's aim is to qualify and **improve the regional system of social-welfare services** for the integration of **third-country nationals belonging to families or single-parent families with minors**.

The main objective is to **promote coordination and connection between public and private stakeholders** and to produce an improvement in the functionality of the social protection instruments that act on the conditions that cause the highest risk of marginality, hardship and social exclusion, limiting the relapse on territorial social and health services.

EXPECTED RESULTS

The provision of new intervention models and guidelines aims to enhance the functionality of the services, in particular socio-welfare services, which will thus be able to offer effective answers in relation to the critical issues encountered.

The **active participation of social volunteer actors**, promoted by each partner at a local level, is aimed at **increasing sensitivity in civil society** and stimulating the construction of a context conducive to integration.

All of these processes have the objective of **producing positive effects both for service operators and for families and single-parent families of third-country nationals** in order to generate an improvement on the regional welfare system and local communities in the terms of a **reduction of conflict and social marginality**.

ACTIVITIES

The project activities include the creation of ad hoc **training courses** and the preparation of a support system for social branches through the activation of expert operators to access health and school services, legal protection, linguistic-cultural mediation.

The multidisciplinary approach involves the **creation of work teams** made up of different specialized professional figures who collaborate in the definition of **personalized and innovative paths**.

Finally, the activity is structured so as to offer **practical tools to improve the integral, multidisciplinary and multidimensional management of the projects** in charge in order to make the services offered by public and private more efficient.
